

Rania Atmani Garmavich

Port Coquitlam, BC | 604-442-1106 | raniaatmani22@gmail.com | linkedin.com/in/rania-atmani-garmavich-13a038365 | github.com/Raat1902

Fall 2026 Computer Engineering Co-op | Technical Support, Product Support, Engineering Assistant

EDUCATION

University of British Columbia Okanagan | BAsC Computer Engineering, Co-op Program | Kelowna, BC | Expected Apr 2028

Average: 86% | Strongest CS area: data structures and algorithm analysis | Relevant coursework: Data Structures, OOP, Digital Logic Design, Signals and Communication Systems, Electric Circuits, Numerical Methods, Computer Engineering Design Studio

Douglas College | Engineering Foundations Certificate | Honour Roll | CGPA: 3.26/4.33 | Sept 2024 - Apr 2025

TECHNICAL SKILLS

Languages: Java (strongest), C++ (intermediate), Python (working proficiency)

Computer science: data structures and algorithm analysis; strongest in theoretical reasoning, tracing behavior, complexity, and edge-case analysis

Support/systems: troubleshooting, service notes, issue follow-up, customer/job records, handoffs, checklists, sensor/control projects

Tools: SQL, Git/GitHub, VS Code, PowerShell, spreadsheets, technical documentation, hardware/software integration notes

TECHNICAL PROJECTS

Onsite Heating Pro | Independent project | React/TypeScript, service records, documentation | github.com/Raat1902/OnsiteHeating-App

- Built a support-focused app around 6 service workflows: customer history, job notes, invoices, payments, repeat visits, and follow-up tracking.
- Implemented record and billing-style workflows, making real HVAC service information easier to organize, review, explain, and hand off between technical/non-technical users.
- Strengthened product-support fit by connecting user needs, issue tracking, documentation, and clear handoffs in one practical internal-tool prototype.

ESP32 HVAC Thermostat Prototype | Independent project | C++/PlatformIO, ESP32, sensors, relay-control logic

- Built a small embedded prototype connecting HVAC concepts with temperature sensing, control-state behavior, status/control endpoints, and setup documentation.
- Improved reproducibility by documenting configuration, dependencies, serial/debug checks, setup steps, and hardware assumptions for clearer troubleshooting.

Algorithm Playground | Independent project | Java, data structures, visualization

- Created a Java visualizer to make algorithm and data-structure behavior easier to inspect, debug, and explain for learning and review.
- Organized demos across 6 algorithm categories, building support-relevant strengths in structured troubleshooting and patient technical explanation.

Ultrasonic Radar Prototype | CMPE 246 group course project | Raspberry Pi, HC-SR04, SG90 servo, documentation

- Contributed to a 0-180 degree hardware/software demo where ultrasonic readings were captured and presented through a browser visualization.
- Supported test evidence, acceptance criteria, screenshots, and final-report material, making the prototype easier to review and explain to non-specialist evaluators.

EMPLOYMENT HISTORY

Onsite Heating & Cooling Ltd. | Assistant Technician | New Westminster, BC | Sept 2024 - Jan 2025

- Accomplished clearer service handoffs by documenting job status, parts, technician notes, and follow-up items, which gave technicians better context for repeat visits.
- Improved support quality by maintaining service checklists and customer/job records, which strengthened traceability between office communication and field-service tasks.
- Built troubleshooting habits by asking clarifying questions, tracking unresolved items, and documenting what changed, which transfers directly to product and technical support roles.

All West Heating Ltd. | Admin and Field Assistant | Coquitlam, BC | Oct 2022 - Apr 2023

- Completed 600+ hours supporting scheduling, invoice records, parts lists, service documentation, installation support, safety checks, and customer follow-up.
- Improved service coordination by maintaining organized job notes and operational records, which supported planning, troubleshooting, repeat visits, and customer communication.
- Built reliability in a fast-moving technical service environment by keeping routine documentation accurate, which strengthened follow-through and support discipline.

LEADERSHIP AND INVOLVEMENT

UBCO Motorsports | Student Engineering Design Team Member

- Develop support-relevant habits by listening to technical discussions, clarifying requirements, documenting constraints, and understanding how clear handoffs reduce mistakes.
- Build communication confidence by learning how technical issues are raised, discussed, documented, and passed between teammates with different responsibilities.
